

January 16th, 2018

Dear PUC,

The physics of climate science demand that we rapidly transition our state to renewable energy from solar or wind. One policy to encourage more in-state solar installations would be to close our borders to solar installations from out of state.

We thought Act 40, passed last fall, was just that. But now learn that existing out-of-state installations would be grandfathered and continue to receive PA SRECs. This will not have the desired effect of energizing the PA solar industry.

I therefore ask you to reconsider the implementation, and exclude out-of-state installations.

Thanks,
